

Breakout Session 2: Track A

COnsortium of METabolomics Studies

Dr. Kelly Crotty
Program Director, NCI

Ms. Kailing Chen
Cloud Architect, CBIIT

COnsortium of METabolomics Studies

Kelly Crotty and Kai-Ling Chen

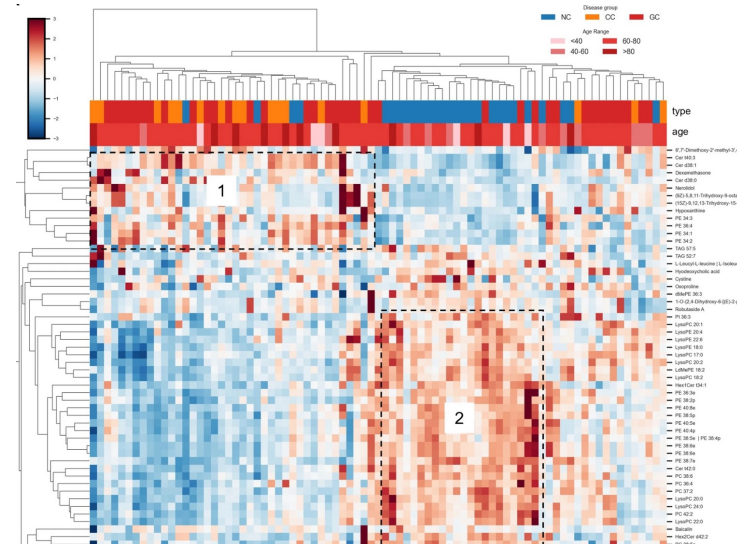

National Cancer Institute

Prospective Cohort Studies

Collect demographic information and samples for baseline measurements

Follow-up: collect additional samples and information on health outcomes (i.e. cancer, diabetes, cardiovascular disease, renal disease, mortality, asthma, etc.)

Prospective Cohort Studies

Prospective cohort studies require a considerable amount of time and resources to have sufficient statistical power and avoid selection bias.

Collaborations among cohorts can increase statistical power of studies

COnsortium of METabolomics Studies

COMETS provides a framework for collaborations among prospective cohort studies and creates an analytical strategy and infrastructure for meta-analysis studies

COnsortium of METabolomics Studies

COMETS has 81 participating cohorts that include over two million study participants

- Spanish Renal Research Network
- Swedish Research Council
- UK Economic and Social Science Research Council
- UK Medical Bioinformatics Partnership
- US Department of Defense

COMETS Project Proposals

- COMETS members can submit project proposals at three due dates per year. They must define required outcome data, exposure data, covariate data, and minimum number of participants for cohorts to participate in the study
- The COMETS Steering Committee reviews the proposal and votes on approval
- The project lead reaches out to COMETS cohort representatives, who may choose to opt-in and share data or analysis results with the project lead for meta-analysis
- Progress is reported annually and reviewed by the COMETS Executive Committee

Sample of Current COMETS Projects

- **Vicky Stevens** (Emory University) and **Steve Moore** (DCEG) – *Metabolomic analysis of breast cancer risk*
- **Burcu Darst** (Fred Hutchinson Cancer Center) – *Genetic imputation of metabolomics data*
- **Wei Jie Seow** (National University of Singapore) – *Blood metabolomics and lung cancer risk*
- **Demetrius Albanes** (DCEG) – *Blood metabolite profiling in prostate cancer risk*
- **Jennifer Ose** (Hochschule Hannover of Germany), **Marc Gunter** (Imperial College London), and **Neli Ulrich** (University of Utah) – *Metabolomic profiles of colorectal cancer: Early detection and prospective cancer risk*
- **Mary Playdon** (University of Utah) and **Steven Moore** (DCEG) – *Metabolomic profiles of dietary factors implicated in cancer etiology*
- **Fred Tabung** (The Ohio State University) – *Metabolomic profiles of inflammatory & insulinemic dietary patterns and colorectal cancer risk*
- **Demetrius Albanes** (DCEG) – *Blood metabolite profiling in malignant glioma risk*
- **Xiang Shu** (Memorial Sloan Kettering Cancer Center) – *Prospective metabolomics study of gastric cancer*
- **Rachael Z. Stolzenberg-Solomon** (DCEG) – *Metabolomic profiles and pancreatic cancer risk*
- **Hyung-Suk Yook** (Vanderbilt University Medical Center) – *Adulthood weight change, blood metabolomic profiles, and lung function*
- **Wayne R. Lawrence** (DCEG) – *Examination of vitamin D-associated and other metabolites in relation to cancer risk and mortality by race and ethnicity*

Challenges in multi-cohort collaborations

- Metabolomics data has been generated in thousands of patients
- Important to look for consistent biomarkers or risk factors across multiple large studies

Security

Many institutes/studies cannot transfer data

Expertise

Working with raw data requires extensive expertise

Solution: Federated analysis model that eliminates data transfer and pools results centrally

Welcome to COMETS Analytics

Perform consortium-based analyses of metabolomics data

[Perform Analysis](#)

COMETS Analytics v2.1 **New Release**

New features include:

- Support for running survival and conditional logistic models

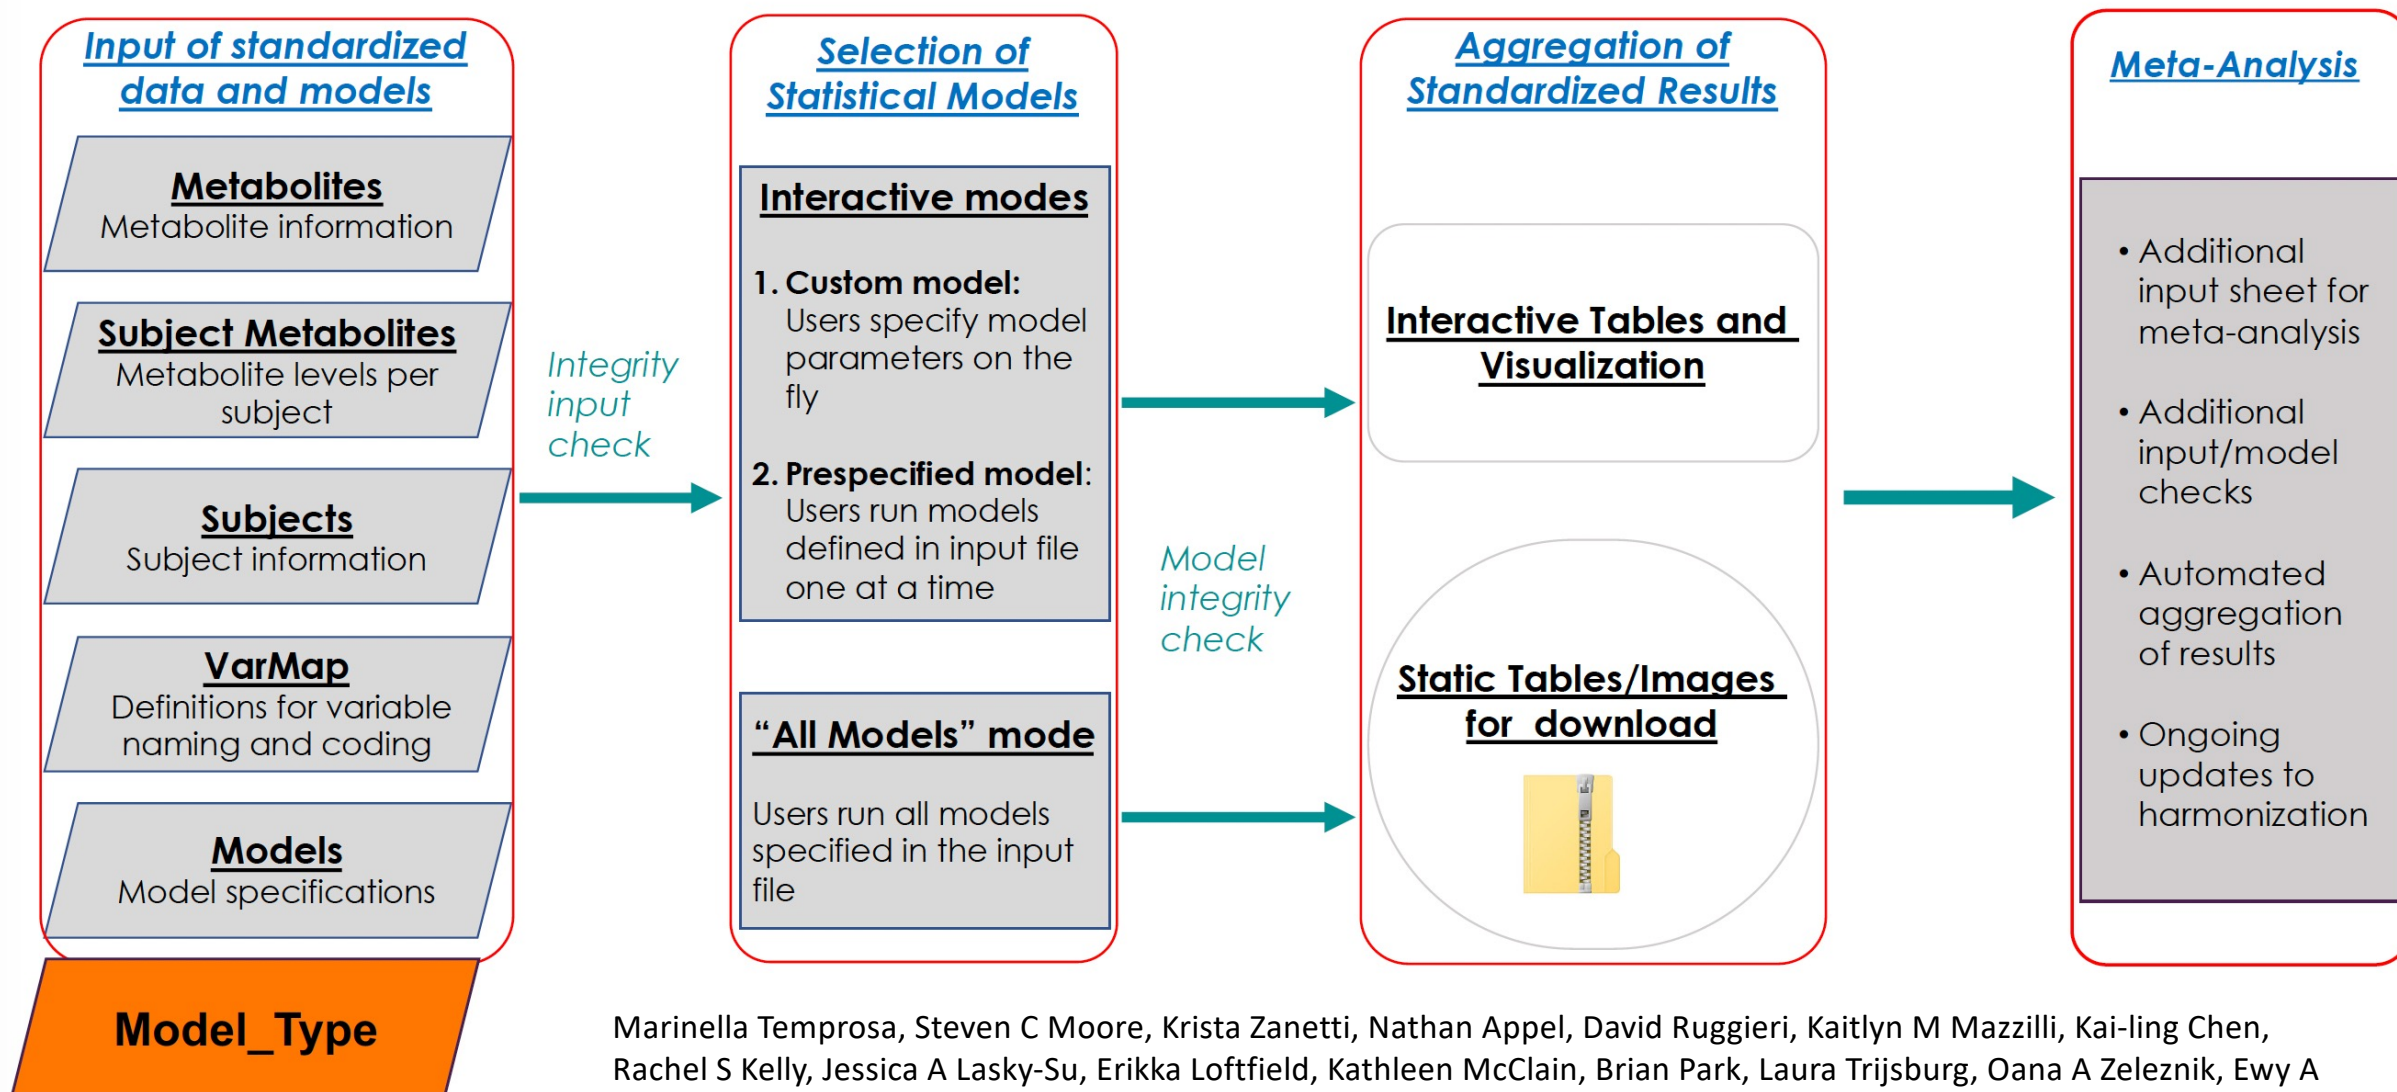

Check out the R Package NEWS for more information.

Roles when Performing Meta-Analyses

- ***Lead Analyst(s)***
 - Coordination of entire project
 - Preparation of input sheet that defines all covariables and models
 - Input sheet sent to individual cohort analysts
- ***Cohort Analysts***
 - Running cohort-level models, using input sheet from lead analyst(s)
 - Sending results to lead analyst(s)
- ***Lead Analyst***
 - Runs meta-analysis with aggregated results

Overview of Using COMETS Analytics

Marinella Temprosa, Steven C Moore, Krista Zanetti, Nathan Appel, David Ruggieri, Kaitlyn M Mazzilli, Kai-ling Chen, Rachel S Kelly, Jessica A Lasky-Su, Erikka Loftfield, Kathleen McClain, Brian Park, Laura Trijsburg, Oana A Zeleznik, Ewy A Mathé, COMETS Analytics: An Online Tool for Analyzing and Meta-Analyzing Metabolomics Data in Large Research Consortia, *American Journal of Epidemiology*, Volume 191, Issue 1, January 2022, Pages 147-158.

COMETS Analytics Access

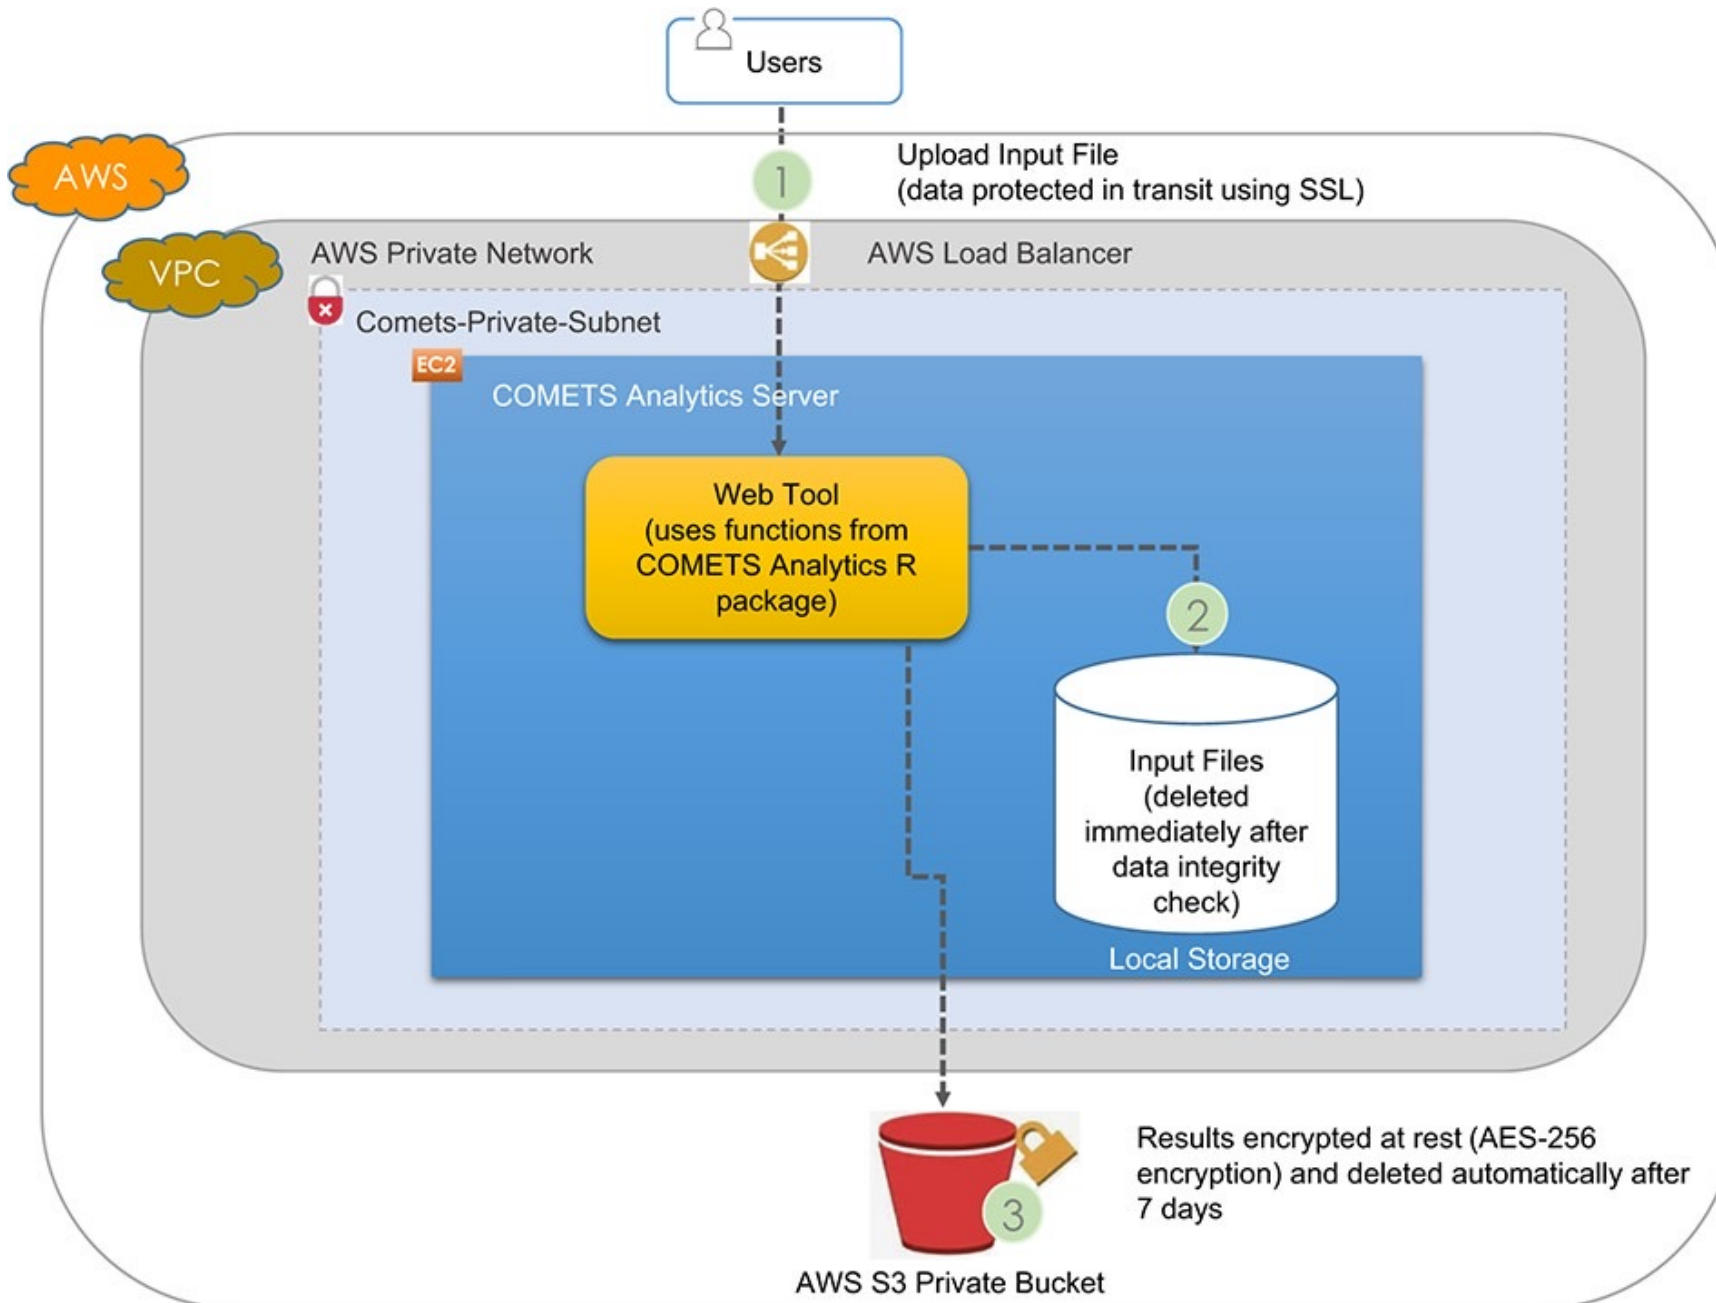

Available on github
Requires minimal knowledge of R/Rstudio to run
Detailed documentation on how to prepare the input and how to run through an analysis are provided

Comets-analytics.org
User-friendly, requires no coding
Operates on secure cloud-based servers that delete data after analyses

**Cloud costs supported by
STRIDES award in FY2020**

Conclusions

- COMETS Analytics provides a framework with which to analyze data and aggregate results for large research consortia that has
 - Protection of data
 - Robust analytics that allow the same model to be applied to all cohorts
 - Real-time checks to ensure high-quality results
 - No requirement for specialized software, servers, or data agreements to use
- STRIDES support allowed users to run analyses through the web-based app which has a user-friendly interface, superior speed, usability, and exploratory tools and operates on secure cloud-based servers that delete data after analyses.
